LONDON:

PRINTED FOR THE ZOOLOGICAL SOCIETY
SOLD AT THEIR HOUSE IN REGENT'S PARK
MCMXXXV.

Papers and Memoirs intended for this work should be addressed to "THE EDITOR of the Zoological Record, Zoological Society, Regent's Park, London, N.W. 8." It is earnestly requested that in the case of separately-printed copies of papers so forwarded, the *original pagination* may be indicated.

PREFACE.

THE seventy-first Volume of the Zoological Record will be ready for distribution in November. The various parts have already been issued separately between June and October.

The present volume contains 1,368 pages of Record matter; this is ninety pages more than that of the previous year. The number of new genera shows a very large increase; 2,727 are listed as against 2,087 in the Record for 1933. This is due not so much to the recent activity of workers, but is the result of an intensive search for such genera as had escaped the notice of Recorders in previous years, especially among the Insecta. This was specially undertaken in order to assist to make complete the new universal list of genera now being prepared under the editorship of Dr. A. C. Neave.

There has been no change among the Recorders since last year.

The size of the present volume has been also increased by the inclusion of a new and revised "List of Abbreviations with Titles of Periodicals." The last list which was published in the Record for 1931 has been thoroughly revised in accordance with the new edition of the "World List of Scientific Periodicals" published in 1933, and it is hoped that the new list will be found useful. It contains the names of many periodicals recently started and not found in the new World List.

The thanks of the Editor and of the Zoological Record Committee are again due to Dr. W. T. Calman, Mr. J. R. Norman, Mr. M. A. C. Hinton, Mr. A. T. Hopwood and Mr. J. R. le B. Tomlin for assistance in reading proofs of those Records in regard to which they have special knowledge ; while Mr. H. G. K. Molineux has again sent a number of references to obscure papers published in Russian and other difficult languages.

The accounts of the "Record Fund" printed overleaf show a balance to the credit of the Fund of £2,070.

EXPLANATORY.

This Volume is printed in the Divisions enumerated on p. vii.

The pagination of each Division is separate, and is given at the top corner of the pages. The number and name of the Division is given as a heading on each page. The date 1934 corresponding to the bulk of the literature indexed is given at the top of each page.

In the Subject Index of each Division authors are quoted by name only. The full references will be found in the Title Section of the Division.

The Literature indexed is mainly that of 1934 but includes entries for earlier years that have been received too late for inclusion in previous volumes.

I. COMPREHENSIVE ZOOLOGY

ARRANGED BY

W. L. SCLATER, M.A.

This section includes works that deal with more than one branch of Zoology, or that are of general interest to Zoologists. It is, therefore, not complete in itself as regards any one subject included in it. The special records complete each subject. A few memoirs included in the special records are repeated in this division as well as the literature on the Genetics of *Drosophila* and some other insects used as a vehicle for these special researches.
